
Research Landscape for Rural & Urban Community Development

Ten recent research papers on smart villages, digital inclusion, public services, education, entrepreneurship and community safety.

What this collection shows

Across the 2024–2026 literature, community development is increasingly framed as an ecosystem: technology matters, but only when it is paired with capable institutions, local participation, skills and trusted access to services.

Governance is infrastructure

Smart-village models place governance, resources, people and technology together rather than treating digitisation as a stand-alone intervention.

Access is more than connectivity

Digital education and literacy studies point to a wider access gap: devices, content, support, confidence and awareness all shape outcomes.

Services need trust

Digital public services can strengthen delivery and citizen trust, but literacy and awareness gaps remain a practical barrier across rural and urban populations.

Local capability compounds

Women entrepreneurs, community technology centres and disaster-information tools show how skills and locally relevant systems can convert access into agency.

Reading signal: The strongest common thread is not “smart technology” alone. It is the design of human systems around technology—leadership, participation, training, inclusion and evaluation.

Research papers · 2024–2025

A structured scan of the first seven papers in the collection, with each paper's main research area and practical relevance.

No.	Research paper	Year	Main research area	Relevance to rural / urban community development
1	Designing a Reference for Smart Village: An Enterprise Architecture Approach	2024	Smart Village, e-Governance, ICT	Uses technology and enterprise architecture to improve rural governance, community welfare and quality of life. [IEEE Xplore]
2	Aligning the Balanced Scorecard with the Smart Village Concept: A Proposal Model	2024	Smart Village Development	Identifies governance, technology, resources and people as major dimensions of rural development. [IEEE Xplore]
3	A Study of Samagra Shiksha Abhiyan: an Initiative to Enrich Digital Education in Rural Area of Jalgaon District Maharashtra	2024	Rural Education, Digital Inclusion	Studies digital education in rural schools and identifies connectivity, infrastructure, teaching materials and technical-support challenges. [IEEE Xplore]
4	Digital Technology and the Empowerment of Indian Women Micro-Entrepreneurs	2024	Digital Entrepreneurship, Women Empowerment	Examines how digital financial services, mentoring, training and e-commerce can support rural and semi-urban women entrepreneurs. [IEEE Xplore]
5	Enhancing Socio-Economic Development Through Digital Literacy: A Strategic Imperative for Rural Communities	2025	Digital Literacy, Socio-economic Development	Examines digital-literacy barriers such as inadequate connectivity, infrastructure and training and their effect on rural communities. [IEEE Xplore]
6	UI/UX Design for a Mobile Flood Information Dissemination Application in Citeureup Village Using the Design Thinking Method	2025	Rural Community Safety, Disaster Information	Develops a mobile information system for rural communities facing difficulties accessing timely disaster information. [IEEE Xplore]

7	Forecasting Computer Literacy Rate of Jharkhand Until 2030: Using Machine Learning Model	2025	Digital Literacy, Rural Development	Uses machine learning to forecast district-level digital literacy and identifies regional disparities requiring targeted interventions. [IEEE Xplore]
---	--	------	-------------------------------------	---

Research papers · 2025–2026

The final three papers extend the collection from access and delivery toward evaluation, participation and future-ready community capability.

No.	Research paper	Year	Main research area	Relevance to rural / urban community development
8	Evaluating DigiLocker's Role in Enhancing Public Service Delivery and Strengthening Citizen Trust in India's E-Governance	2025	E-Governance, Public Services	Studies digital public-service delivery across rural and urban populations and identifies digital-literacy and awareness gaps. [IEEE Xplore]
9	Integrated Evaluation Model for Smart Village Effectiveness: A Mixed-Methods and Thematic Analysis Approach	2026	Smart Village, Community Participation	Develops an evaluation model considering digital infrastructure, technological literacy, village leadership and community participation. [IEEE Xplore]
10	Reimagining the “Smart People” Dimension: Jordan’s Knowledge Stations and the Shift Toward AI-Ready Future Stations	2026	Digital Inclusion, Community Development	Examines community technology centres supporting rural and underserved populations through digital skills, entrepreneurship and digital-government access. [IEEE Xplore]

How to use this scan

Use the table as a starting point for a literature review, programme design or evaluation framework. The papers collectively suggest assessing both enabling conditions—connectivity, infrastructure and skills—and outcomes such as participation, trust, welfare, entrepreneurship and safety.
